

WELLSHINE DISTRIBUTORS

Wholesale Web Portal User Guide

1. Portal Navigation & Homepage Overview

The Wellshine Distributors portal features a clean, responsive layout designed for quick access on both PC and mobile viewports. The homepage serves as the brand directory, outlining wholesale products, company quality guarantees, and direct communication widgets.

Core Layout Regions & Navigation Buttons

- **Widescreen Header Navigation (Figure 1.1):** Located at the top of the screen. Features clean navigation buttons for "HOME", "ABOUT", "PRODUCTS", "CONTACT", and "SHOP", followed by a secure Customer Profile Login Indicator pill.
- **Responsive Brand Slideshow:** The homepage backdrop dynamically transitions between high-quality spices, cashews, and dry fruit images behind a glassmorphic hero title block.
- **FAQ Accordion Block (Figure 1.2):** Scrolling down reveals an interactive, styled Accordion FAQ list. Users can click any question header; the chevron indicator bounces cleanly using custom animations, expanding the card to reveal descriptions.

Figure 1.2: Mobile layout displaying interactive FAQ Accordion Block

2. Wholesale Catalog Portfolio

Accessing the "/products" route opens the wholesale catalog portfolio. The interface loads database products on the server side instantly, optimizing crawler indexing, and then hydrates client controls for smooth customer usage.

Catalog Interface Controls

- **Category Quick-Filter Buttons:** Located at the top of the grid. Allows users to immediately isolate items in "Cashews", "Dry Fruits & Seeds", or "Premium Spices" categories.
- **Live Search Box:** An interactive text input that filters product cards in real time as the user types keywords (e.g., "Amla" or "Badam").
- **Detailed Product Cards (Figure 2.1):** Each card lists the product picture, the brand name, a short description, the current unit wholesale price, stock availability badge, and an interactive "Add to Cart" button.
- **Catalog Quick-View Modal:** Clicking a product details button opens a pop-up modal showing higher-resolution details, full specifications, and packaging weights.

3. Customer Accounts & Ordering Workflow

Purchases are conducted securely through the gated wholesale shopping cart interface on the "/shop" route. The portal requires authentication to prevent generic retail purchases and secure wholesale coordinates.

Client Registration & Login Fields

- **Store Registration Form:** New wholesale clients must complete the signup panel. The system prompts for a secure Store Name, Delivery Address, Pincode, Email, and Password.
- **Secure Client Login:** Registered stores log in with their email and password, which returns a stateless JWT authorization key in their browser.

Shopping Cart & Bulk Discounts

- **Shopping Cart Matrix (Figure 3.1):** Maintains selected items, pricing per unit, quantity selectors (+ and - buttons), and line subtotals.
- **Automatic Volume Discounts:** The checkout engine automatically applies tiered volume discounts. If the quantity reaches the wholesale trigger (e.g. W320 Cashews), the system automatically applies a 5% discount (visualized in gold in the cart details).
- **Wholesale Checkout:** Clicking "Place Order" transmits the shopping cart, store delivery address, and contact number directly to the database and fires email notices.

4. Administrative Dashboard - Order Fulfillment

Store administrators manage wholesale operations through a password-gated panel at "/admin". The admin console is split into two central control consoles: Order Fulfillment Queue and Catalog Inventory Editor.

Fulfillment Control Buttons & States

- **Orders Grid Table (Figure 4.1):** Displays every active order queue showing Order ID, Store Details, Invoice Total, Status badge, and Order Date.
- **Fulfillment Action Buttons:** Each row features direct control buttons to manipulate order states:
 - **"Confirm" (Gold checkmark button):** Sets order status to "Confirmed" and triggers invoice processing.
 - **"Cancel" (Red slash button):** Sets order status to "Cancelled" to immediately reject invalid purchases.
 - **"Delete" (Red trash icon):** Purges the order record from the queue.

5. Administrative Dashboard - Inventory Editor

The Catalog Editor enables the administrator to manipulate inventory levels, adjust bulk wholesale pricing tiers, and configure volume triggers in real time without editing source files.

Inventory Editor Controllers

- **Add New Product Button:** Opens a blank card form allowing the admin to upload product details, specify categories, and set images.
- **Stock Adjustment Controls (Figure 5.1):** Numeric input selectors allow the admin to immediately increment/decrement active stock levels.
- **B2B Discount Configurator:** Input fields allowing the admin to set the "Discount Percent" (e.g. 5%) and the "Discount Trigger Quantity" (e.g. 3 units).
- **Save Details Button:** Sends a secure POST payload to database routes to update product schemas instantly.
